President’s Message

Welcome to New York City, Fordham University, and the 2017 SQIP Conference on Qualitative Methods. This year’s conference promises to be an especially exciting and generative event for learning and collaboration about qualitative methods and methodologies. The characteristic combination of rigor and creativity, along with a wide variety of research interests, will be present here. This assembly of researchers—including seasoned investigators and distinguished pioneers of qualitative methods, early career scholars, and students, takes place at a time in history when qualitative research is flourishing expansively in unprecedented directions, changing the way science is conducted, opening up vistas of new knowledge, and aiming to better the world through social justice and the empowerment of persons and peoples. This year’s conference features presentations on methods outside of psychology because transdisciplinary fertilization is so crucial to the development of research methods. Our invited speakers will be bringing expertise from such disciplines as history, sociology, and anthropology. Fordham University’s Bronx African American History Project, offering two Keynote Panels, is exemplary not only for its application of oral history methods and its fruitful community partnerships, but for its data archives, which offer invaluable resources for psychologists and other human science researchers. Our Keynote Address will be given by Dr. Kim Hopper, outstanding medical anthropologist whose research on homelessness and mental health (especially schizophrenia and recovery from serious mental illness) based at Columbia University, has provided leadership in qualitative methods for almost 4 decades. I am enthusiastic about the vibrant diversity of participants, who will be presenting many dozens of cutting edge research projects in symposia, paper sessions, and posters. History is being made here by works that touch on so many topics, use the full spectrum of qualitative methods, explore relations among various methods, and address the most challenging methodological, ethical and social issues. This conference will encourage and enable networking, and I hope that all participants will connect with each other here and build personally fulfilling, professionally generative, and lasting collaborations.

I would like to thank the many who have helped organize this conference, including the SQIP Executive Committee and the Program Committee, which has worked with tireless care to make this conference possible. I also want to thank Fordham University for offering the wonderful space at its Lincoln Center campus, especially Vice President of Lincoln Center Campus Brian Byrne and Dean John Harrington; and our financial supporters—the Bronx African American History Project, the Fielding Graduate University, and Fordham’s Graduate School of Religion and Religious Education. Finally, I would like to thank our co-sponsors, who have encouraged and supported this conference from the beginning: Fordham’s Bronx African American History Project, the Department of African and African American Studies, the Department of Communication and Media Studies, the Department of Psychology, the Department of Sociology and Anthropology, the Department of Theology, the Graduate School of Education, the Graduate School of Religion and Religious Education, and Fielding Graduate University.

Frederick J. Wertz
President, Society for Qualitative Inquiry in Psychology, APA Division 5
In 2011, the Society for Qualitative Inquiry in Psychology became an official subdivision of the American Psychological Association Division 5, which was at that time called the Division of Evaluation, Measurement and Statistics. In 2014, Division 5 changed its name to the Division for Quantitative and Qualitative Methods. SQIP aims to develop and disseminate qualitative methods suitable for acquiring knowledge of psychological life (broadly conceived including lived experience, expression, practice, and social conduct). We host an annual conference, award prizes through Division 5 for exemplary dissertations, teaching/mentorship, Early Career Contributions and Distinguished Contributions in qualitative psychology, and have an ongoing series of task forces on topics such as the publication of qualitative research, ethics, and graduate and undergraduate training in qualitative methods. We connect those who are seeking journal reviewers, adjunct professors, and/or research consultants with expertise in qualitative methods with consultants from among our membership who can meet their needs. Our flagship journal, published by APA under the editorship of Ruthellen Josselson, is *Qualitative Psychology*.

The Bronx African American History Project

The Bronx African American History Project is a community university partnership formed in response to the exclusion of African Americans from published accounts of Bronx History, and the exclusion of the Bronx from histories of African American Life in New York City. Founded in 2003 as a collaboration between Fordham's Department of African and African American Studies and the Bronx County Historical Society, it has grown to become one of the largest community based oral history projects in the nation. In its 14 years of existence, it has conducted, transcribed and digitized more than 300 oral history interviews, ranging from participants in the first large wave of migration from Harlem to the Bronx, to pioneering settlers in public housing, to artists and educators who made the Bronx the site of extraordinary musical creativity for three generations, to activists who helped the Bronx survive arson and disinvestment, to African immigrants who have turned the Bronx into the largest site of African settlement in the Western Hemisphere. It has also inspired two memoirs, a book of oral histories, a novel and scores of articles based on the archive it has amassed, which includes documentary collections donated by community groups and individuals as well as the oral histories. Scholars around the nation and the world now use the BAAHP data base on a daily basis, both digitally, and by visiting BAAHP collections at Fordham and at the Bronx County Historical Society.

The BAAHP's impact, by unleashing once marginalized voices through oral history, has extended far beyond the world of scholarship. Educators and community developers have seized on the information the BAAHP has uncovered to create innovative programs in Bronx schools, to landmark long neglected historic sites, to organize concerts celebrating the Bronx's unique musical creativity, to defend immigrant communities and religious minorities under siege, and to design affordable housing complexes which recapture the atmosphere of long forgotten communities the BAAHP's research has highlighted. When history is truly the voice of ordinary people, and when scholars take their cues from those people in determining what subjects to cover, it can be a powerful tool for community revitalization.

Kim Hopper

Dr. Kim Hopper, Professor of Clinical Sociomedical Sciences in Columbia University’s Mailman School of Public Policy, medical anthropologist, and research scientist at the Nathan S. Kline Institute for Psychiatric Research, co-directs the Center for the Study of Issues in Public Mental Health. He is author of *Reckoning with Homelessness* (Cornell University Press, 2003), a stocktaking of two decades of research, advocacy, and theoretical work, and co-editor of the forthcoming *Recovery from Schizophrenia: An International Perspective* (Psychosocial Press), a report from the WHO collaborative study on the long-term course and outcome of schizophrenia. He is also author of a critical review of practical quandaries in applied anthropology. Since 1979, Dr. Hopper has done ethnographic and historical research on psychiatric care and on homelessness, chiefly in New York City. Active in homeless advocacy, he has served as president of the National Coalition for the Homeless. Current research interests include the reconfiguration of mental health, cross-cultural studies of psychosis, community-based modalities of coercion, and recovery and support in serious mental illness. Dr. Hopper is currently co-investigator on numerous NIMH funded studies. He was co-convener of Qualitative Research Institute at NYU and consults frequently on methodological issues in mental health services research. He has served as a member of the NIMH Services Research Scientific Review Committee.
